23. Problem: (use additional Sheets if necessary) When printing from within a ClearCase view on a Solaris 2.5.1 machine, lpsched core dumps. This has been causing the helpdesk a good number of headaches recently and appears to have surfaced after upgrading the Xterm servers where people would be more commonly printing from within a view. So, it appears that the problem was introduced with the new recommended set of patches. The good news is that the latest lp patch (103959-10) fixes the problem. The lp patch introduced with the latest ECS recommended bundle is 103959-09.						
24. Proposed Solution: (use additional sheets if necessary) Install the latest solaris 2.5.1 lp patch 103959-10 for all EDF SUN machines and Xterm servers. Tar file will be put on lemmings machine by Kevin Lange. <i>Tar file name on lemmings /data0/CD-INBOX/103959-10-tar.2</i> Also, include this patch in the master bundle for Solaris 2.5.1. Attachment provides list of SUN Solaris Host machines. Capture installation instruction and provide it to ICOTS (T. Hasandka). <i>Check LSum: - 402746173</i>						
25. Alternate Solution: (use additional sheets if necessary) N/A						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Printing from clearcase view, lpsched core dump will continue to occur if lp patch is not install. RTSC helpdesk will be impacted to support this repeated lpsched core dumps
